

BeLeaf Innovating Habit Tracking

A Gamified Approach to Productivity

Presented by:

The Horizon Crew

Opportunities: Solving the Habit Tracking Problem

Unique Gamification Approach

Our solution engages users through gamification, motivating them to build habits by rewarding progress, unlike traditional trackers that lack interaction and engagement.

Comprehensive Habit Integration

The platform combines habit tracking, to-do lists, and workout schedules in one place, offering a holistic view of personal growth that existing solutions fail to provide.

Key Features

01

Habit Tracking

Simple interface to monitor daily habits. Daily, monthly and yearly progress report and statics.

02

To-Do List

Organized tasks for enhanced productivity with reminders.

03

Workout Schedule

Customized plans to achieve fitness goals, dedicated batches and streaks .

Google Technologies Used

Our solution leverages **Google's powerful tech stack** to enhance functionality, scalability, and user experience, including cloud services, data analytics, and real-time database capabilities.

Feature Requirements

1600D coming & bientUisaamø

Process Flow

- Step 1: Onboarding → User personalizes goals & preferences
- Step 2: Create Habits → Add daily/weekly habits + fitness goals
- Step 3: Daily Tracking → Log activities, check-in, sync wearables
- Step 4: View Progress → Analytics dashboard, streaks, completion rate
- Step 5: Get Rewards → Badges, points, motivation, challenges
- Step 6: Achieve Goals → Build consistency, maintain streaks, transform lifestyle

Wireframes & Mockups

Wireframes: Structure & Flow

Structure the habit dashboard, habit cards, calendar views, and progress charts—ensuring seamless user navigation and data clarity.

Mockups: Visual Experience

Visualize the complete fitness experience with color-coded habits, motivational designs, achievement badges, and wearable integration elements.

Together: User Engagement

Create an intuitive platform where users effortlessly track daily habits, monitor fitness goals, and visualize progress streaks.

High-Fidelity: Gamification

Showcase the gamified experience—badges, leaderboards, and motivational features—before development investment begins.

MVP Snapshots

This section provides a **glimpse of the product** through visual representations of the user interface, highlighting key features, user engagement, and the gamification approach that makes tracking habits enjoyable.

Future Developments and Insights

1. Seamless Data Integration

We are expanding our ecosystem to become the central hub for your health data. By bridging the gap between hardware and software, we ensure every movement is accounted for.

Google Fit Sync: Fitness data integration to keep your profile updated effortlessly.

Strava API Connection: Automatically import cycling, running, and swimming sessions to eliminate manual entry.

2. The "Gold Point" Economy (New Feature)

We are introducing a merit-based reward system designed to turn discipline into digital currency.

Earn: Complete daily habits or hit fitness milestones to accrue Gold Points.

Milestones: Bonus points for "Streaks" (e.g., 10 days of hitting habit goals).

3. From Sweat to Savings (Marketplace)

We are closing the loop between fitness and lifestyle by giving your points real-world value.

Redeemable Coupons: Once a threshold is met, users can convert Gold Points into discount codes or vouchers.

Partner Network: Valid across major online shopping platforms, sports apparel brands, and health-tech stores.
